Hello Im newbie here.

How I can disable Swam on my Proxmox Node? but in KVM it is Enable?
any one have a guide?

Use the following command to disable all swap partitions on the host:

> Code:
>
> swapoff -a

To persist the change, remove/comment out the swap entries from
`/etc/fstab`.

> Skyzone said: ↩
>
> but in KVM it is Enable

Swap inside VMs is completely independent of swap on the host. If the OS
inside the VM was configured to use swapping (as many installers do
automatically), it will continue to swap as before. If you want to disable it
there as well, you generally can use the same approach as for your host.

Best regards,
Lukas

how about if I increase Swap of the Dedicated?
because default SWAP is 2GB only can I increase SWAP of my Dedicated
Node?

When using LVM there is a "swap" LV used. So your VG would need some
unallocated space and then you could use lvresize to resize that "swap" LV
and later format the LV with mkswap.
Another option would be to add an additional swap file.
