Install Kubernetes

Canonical Kubernetes is pure upstream and works on any infrastructure, from bare metal to public clouds and edge. Deploy single-node and multi-node clusters to support container orchestration, from testing to production. Get the latest innovations from the Kubernetes community within a week of upstream release, enabling your team to learn, experiment and upskill.

[Read the docs](#) [Purchase support with Ubuntu Pro](#) ›

Kubernetes cluster with K8s snap

Single-node

Multi-node

Install Kubernetes with a single command. Canonical Kubernetes comes with in-built networking, gateway, local storage, DNS, load balancer, metrics server and ingress.

[Read the docs to learn more <https://documentation.ubuntu.com/canonical-kubernetes/latest/src/snap/>](https://documentation.ubuntu.com/canonical-kubernetes/latest/src/snap/)

1. Install the K8s snap

```
sudo snap install k8s --classic
```

Don't have the snap command? [Get set for snaps <https://docs.snapcraft.io/installing-snapd>](https://docs.snapcraft.io/installing-snapd)

2. Bootstrap the cluster

```
sudo k8s bootstrap
```

3. View status of your installation

```
sudo k8s status
```

4. Start using Kubernetes

```
sudo k8s kubectl get all --all-namespaces
```

Multi-node Kubernetes cluster with K8s charm

Get automated Kubernetes operations from bare-metal to the cloud. Build your Kubernetes cluster from the ground up, integrate it with your favorite tools, and create multi-cloud topologies.

[Install Canonical Kubernetes with Juju <https://documentation.ubuntu.com/canonical-kubernetes/latest/src/charm/tutorial/getting-started/>](https://documentation.ubuntu.com/canonical-kubernetes/latest/src/charm/tutorial/getting-started/)

Multi-node Kubernetes with Cluster API

With Canonical Kubernetes you can deploy and operate Kubernetes through Cluster API (CAPI) bootstrap and infrastructure providers.

[Deploy Canonical Kubernetes with Cluster API <https://documentation.ubuntu.com/canonical-kubernetes/latest/src/capi/tutorial/getting-started/>](https://documentation.ubuntu.com/canonical-kubernetes/latest/src/capi/tutorial/getting-started/)
